DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 5, drawn to an expression vector comprising a recombinant vaccinia virus with a mutation in the E3L gene and an exogenous DNA, classified in class 435, subclass 320.1.
- II. Claims 2 and 6, drawn to an expression vector comprising a recombinant vaccinia virus with a deletion spanning amino acids 1-83 of the E3L gene and an exogenous DNA, classified in class 435, subclass 320.1.
- III. Claims 3 and 7, drawn to an expression vector comprising a recombinant vaccinia virus with a deletion spanning amino acids 1-54 of the E3L gene and an exogenous DNA, classified in class 435, subclass 320.1.
- IV. Claims 4 and 8, drawn to an expression vector comprising a recombinant vaccinia virus with specific amino acids within the E3L gene and an exogenous DNA, classified in class 435, subclass 320.1.
- V. Claims 9-11, drawn to a method of making a recombinant gene product, classified in class 435, subclass 69.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Art Unit: 1648

inventions comprise structurally different vaccinia viruses, which would result in different products and effects when the vector products are expressed.

Inventions I-III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method of making a recombinant gene product can be used with different products, i.e. the products of groups I, II or III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
